In response to Applicant's arguments regarding claim 1 that "as will be readily apparent to the Examiner, the content application descriptor of figure 7 of Gibbons fails to disclose or even suggest, for example, a "MIDlet-Jar-Size;" as well as a "MIDlet-Vendor;"; likewise, the web descriptor file of figure 11 of Gibbons also fails to disclose or even suggest, the above mentioned attributes which are in a Java Application Descriptor" (see page 13 of Applicant's arguments), Applicant should note that the features upon which applicant relies (i.e., MIDlet-Jar size and MIDlet-Vendor attributes) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

In response to Applicant's arguments regarding claim 1 that "the content descriptor file and the web descriptor file either alone or in combination do no correspond to a Java Application descriptor, nor a Java Application Descriptor having attributes as recited in the independent claims" (see page 13 of Applicant's arguments), Examiner respectfully disagrees. Gibbons discloses an applicator descriptor (i.e. content descriptor file/web descriptor file, see Figs.7 and 12 and associated text, e.g. col.24 lines 38-41) a first data element comprising a value of the MIDlet-Name attribute of the Java Application Descriptor (i.e. resource-Id, see Table 2 lines 12 and col.18 lines 35-37- the application submitted with the file is a midlet and is identified as "Stockticker_1" by content providers), the second data element comprising the value of the MIDlet-Jar-URL attribute of the Java Application Descriptor (i.e. content-URL, see Table 2 line 13 and col.18 lines 37-39 – the application resides at the URL: "http://www.midletcentral.com/store/jar/Stockticker.jar?id=123") and, for each of the third data elements, wherein the second data portion defines a translation of the name defined by the value of the MIDlet-Name attribute into a language specified by the Individual locale Identifier portion (i.e. locale, see Table 2) of the third data element (see col.18 lines 29-32). Therefore, the content descriptor file/web descriptor file of Gibbons does teach a Java Application Descriptor having attributes as recited in independent claim 1 and other similar independent claims.
